

4.6 Meter Trifold ESA

The CPI Antenna Systems Division 4.6 Meter Trifold™ is a transportable satellite antenna system, designed for use worldwide in various applications serving data, voice and communications networks.

A broad range of adjustments provides non-critical Positioner/Trailer orientation and the ability to view geostationary satellites, horizon-to-horizon, from any location worldwide. The system provides a high quality and dependable antenna platform, supported by the worldwide CPI Antenna Systems Division service and support network.

The electrical performance and versatility allows the ability to configure the antenna with a variety of transmit and receive feed assemblies. This versatility provides the ability to configure the antenna with multiple linearly or circularly polarized C-band, X-band, X-band Low Passive Intermodulation (PIM), Ku-band, K-band, and Ka-band feed systems. Each feed system has been designed to be easily removable for transport.

The antenna system design consists of a spun aluminum reflector, a removable subreflector, heavy duty elevation over azimuth Positioner, and an optional heavy duty Trailer for transport.

The 4.6m Trifold™ system provides a complete solution for mobile communications. Its versatility allows the system to be configured to meet various customer applications, including commercial and military.

Trifold™ antennas can have non standard custom designed configuration such as:

Positioner Configurations

Three positioners are available for Trifold™ antennas.

- SPP, standard positioner uses a single azimuth motor with chain driven wheel and dual jack for the elevation. This positioner is only designed for positioning the antenna.
- LPP, low profile positioner uses an anti-backlash dual azimuth drive coupled to a chain driven wheel as well as a dual jack for the elevation. This positioner provides an accurate azimuth and elevation pointing for positioning, tracking and auto acquisition.
- RPP, this positioner is similar to the LPP version but includes a sealed bearing precision azimuth system to improve positioning and tracking accuracy for applications up to Ka band.

Both the LPP and RPP positioner with their low profile design provide the capability to the Trifold™ antenna system to be air transportable in C-141, C-17, C-5, C-130 when using CPI Antenna Systems Division trailers.
